

Quantum Summit 2024

Setting the framework for broad economic impact

Quantum computing isn't just a future trend anymore – it's here to stay and promising to solve both local and global problems in various fields that are beyond the reach of today's computers. But how to leverage this potential and pave the road from today's proofs of concept to broad industrial adoption of the technology? What do industry & economy in Germany and Europe need to become quantum-ready and fully benefit from the potential of quantum computing technology? What technological, structural and economic challenges are to overcome?

On **September 20th and 21st**, we discussed these pressing questions in real life in the heart of Berlin – at **Quantum Summit 2023!** Together with key industrial and political decision makers as well as experts from research institutions, we shared important insights on quantum computing implementation and discovered how today's political, economic and technological developments are shaping the quantum computing future in Europe.

The next Quantum Summit will be held on the 25th and 26th of September 2024. Together with our partner conference Big-Data.AI Summit 2023, we will explore over these two days how to unlock the value of technology for your company!

We are looking forward to welcoming you in Berlin!
